This argument also proves that there is no water on that side of the moon which we have never had an opportunity to observe. 198. The Moon s Mountain Forms.--The mountainous formations of the moon may be divided into three classes. A. Isolated peaks, or sugar-loaf mountains, rising suddenly from plains nearly level, sometimes to a height of 4 or 5 miles. Such peaks also frequently occur in the centres of circular plains. B. Manges of mountains, extending in length two or three hundred miles, and sometimes rising to the height of from 18,000 to 20,000 feet. Sometimes they run nearly in a straight line, and sometimes they form...
