Annotated Catalogue of African Grasshoppers 2 Part Paperback Set (Paperback)

By H.B. Johnston

CAMBRIDGE UNIVERSITY PRESS, United Kingdom, 2010.

Paperback. Book Condition: New. Reissue. 326 x 250 mm.

Language: English Brand New Book ***** Print on Demand

*****.When this book was first published in 1956, African

grasshoppers were showing signs of becoming major pests. It

is clearly a first essential to study the numerous different

species systematically and in detail. In this catalogue the

author has checked every item and has arranged a complete

set of references in an orderly form, so that the published work

on each species can easily be traced. Under each genus and

species summarized annotations, in chronological order, refer

to the full bibliography at the end of the volume. These records

are also analysed to provide references to descriptions, keys,

illustrations, morphology, nymphal stages, ecology, bionomics,

economic importance of the species, and their distribution

within Africa. The author has considerable research experience

of African locusts and grasshoppers, and a thorough

knowledge of the literature. His catalogue, which has been

sponsored by the Anti-Locust Research Centre, will be a useful

basis for preventative action by insecticides and methods of

land use.

Reviews

This written book is great. I am quite late in start reading this one, but better then never. You will not really feel monotony at at any moment of your time (that's what catalogues are for about when you check with me).

-- **Abe Reichel DDS**

Absolutely among the best book We have ever study. It is actually writter in easy words instead of hard to understand. I found out this publication from my i and dad encouraged this book to find out.
